Abstract of CN1175482

A V-Si molecular sieve having a structure similar to ZSM-12 has a structural formula: nR.(SixVy)O2, where R is ammonium hydroxide tetraethyl, n is mole number and equalto 0.01-0.5, x is mole number of Si, y is mole number of V, x+y=1, x=0.950-0.999 and y=0.001-0.050. Said molecular sieve is directly prepared by hydrothermal synthesis in the absence of alkali-metal cation and using ammonium hydroxide tetraethyl as template agent, and has excellent catalytic performance for selective oxidation of hydrocarbon.
